About me

Computer Science graduate aiming to contribute to the advancement of safe, robust, and beneficial AI.

Education

POLYTECH LYON

Specialised computer engineering course

2020 - 2025 Lyon, France

- General IT
- Focus on mathematics
- Erasmus Exchange at the university of Ljubljana, Slovenia

Relevant Certifications

BLUE DOT IMPACT - AI ALIGNEMENT

12-week curriculum to introduce key concepts in AI safety and alignment

June - September 2024 Online

Link to the certificate

STANFORD ONLINE

Machine Learning Specialization

2023 Online

Link to the certificate

DEEPLEARNING.AI

Natural Language Processing Specialization

August 2023 Online

Link to the certificate

Hackathon Experience

HACKATHON DIGITAL SERVICES (H)ACKED

Feb 2024 Brussels

A day-long challenge organized by PEReN & the European Commission aimed at answering data-driven questions. We leveraged RAG techniques on cutting-edge LLMs and utilized the Jean Zay supercomputer (IDRIS - CNRS).

Publication

When Quantization Affects Confidence of Large Language Models ?

2024 Accepted to NAACL

In this article, we examine the influence of *Quantization* on the calibration and confidence of the BLOOM, OPT, LLaMA and Mistral models.

Link to the publication

Skills

THEORETICAL EXPERTISE

•Machine learning •LLM multi-agent •Neural networks •NLP •AI alignement

TECHNICAL AI/ML

•LangGraph/Langchain •Pytorch •Jupyter notebooks •Numpy •Pandas •HuggingFace Librairy

GENERAL PROGRAMMING

•Python •Git •SQL •C++ •Java •LaTeX

LANGAGES

•English: B2+ •French: Native •Spanish: Intermediate

SOFT SKILLS

•Team work •Curiosity •Project management •Optimism

Relevant Experience

R&D AI ENGINEER

Infologic

September 2025 – Present Lyon, France

Contributing to a growing R&D team working on innovative initiatives to enhance the company's agri-food ERP platform and internal services.

- Building AI features that process and integrate natural-language product orders received through text-based communication channels directly into the ERP.

LLM SAFETY IN MULTI-AGENT SYSTEMS – INTERNSHIP

Orange France

February 2025 – August 2025 Lyon, France

6-month internship focused on the safety of autonomous agents based on large language models:

- Conducted a literature review on multi-agent systems and AI safety
- Contributed to a proof-of-concept for automating internal processes with LLM-based agents

NLP RESEARCH INTERNSHIP

ERIC Laboratory

September 2023 – January 2024 Bron, France

5 months-internship on the quantization of LLMs as part of the **ANR DIKE project**:

- Reading of articles and familiarization with quantization methods (LLM8, GPTQ, etc.).
- Performing experiments
- Calculation of metrics to evaluate models.

Co-authored a publication accepted to the NAACL conference on the impact of quantization on LLMs confidence.

Spotlight Projects

MULTI-AGENT LLM EXPERIMENTATION LangGraph, Python

March 2025

Link to github of this project

GPT-LIKE MODEL Python, Pytorch

Sept 2023 ERIC Lab
